

Technical Specifications for the Nickel Putter Ball Pick-Up

Material: Wear resistant and extremely durable synthetic material (PC – Poly Carbonate) developed by BASF

Weight: 20 grams (0.705 ounces)

Dimensions:	Height:	15 mm (0.59 inch)
	Length:	30 mm (1.18 inch)
	Width:	20 mm (0.78 inch)

Color: Frosted Black

Manufacture: Using the most up-to-date injection molding technology for first class quality.

Technology / Design: The Ball Pick-Up is using two smaller springs that are used to hold the Ball Pick-Up closed when not in use and to enforce the load / pressure on the ball when grabbing it out of the hole.

Mounting / Installation: The Ball Pick-Up comes with three smaller screws that are needed to install it securely on any putter grip. The screws are self taping and therefore no drilling is required. Please follow those 3 easy steps:

- Unpack the Ball Pick-Up, flick it open and place it in the center of your putter grip (make sure it does not overlap on any corners)

- Using a Philips Screw Driver please start to screw in the two smaller black screws first (they will hold the Ball Pick-Up in place and prevent it from rotating).

- The bigger silver screw goes in next. It is strong enough to keep the Ball Pick-Up attached to the grip. Please note that a moderate force is fine and there is no need to torque the screws extremely tight.

Your Ball Pick-Up is now installed and ready to use.
